

Abstract

A portable controller

An arrangement for configuring a device (102) of a system (101) by
5 transferring control information from a removable controller (2) thereto is
disclosed. The controller (2) comprises input means (12) for receiving control
information for configuring the device (102), memory circuitry (6) arranged to
store and retrieve control information for configuring the device (102), and
output means for transferring to the system (101) retrieved control information
10 for the device (102). The system (101) comprises means (128) for coupling
with the output means of the removable controller (2) to transfer retrieved
control information therefrom, and control means (114) arranged to configure
the device (102) in dependence upon the transferred control information.
